HTML

Picture Element

Purpose

- The picture element allows us to display different pictures for different devices or screen sizes.

Different sizes

Desktop

Mobile

<picture>

- The <picture> element contains a number of <source> elements, each referring to different image sources.
- This way the browser can choose the image that best fits the current view and/or device.
- <picture>
 <source media="(min-width: 650px)" srcset="img_desk.jpg">
 <source media="(min-width: 465px)" srcset="img_mob.jpg">

</picture>

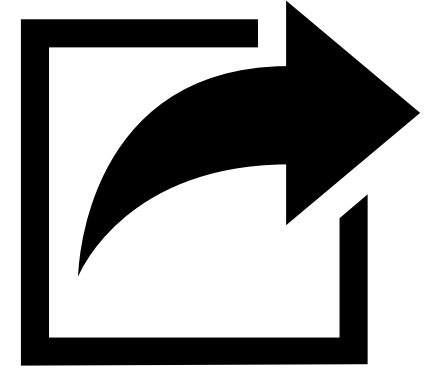

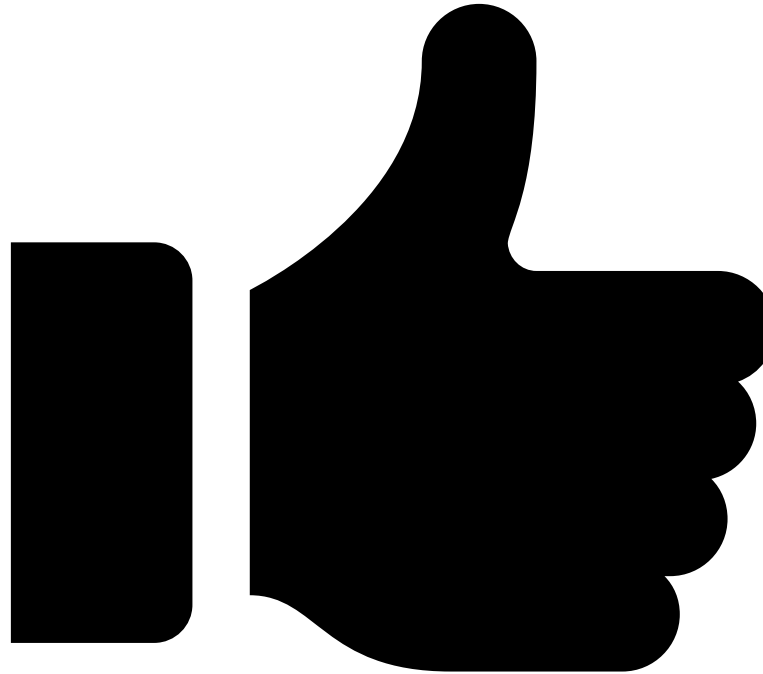

Note

- Always specify an `` element as the last child element of the `<picture>` element.
- The `` element is used by browsers that do not support the `<picture>` element, or if none of the `<source>` tags matched.

When to use the Picture Element

- 1. Bandwidth
- 2. Format Support

Thank you
