HTML

ID

Id Attribute

- The id attribute specifies a unique id for an HTML element
- to select an element with a specific id, write a hash (#) character, followed by the id of the element:
- **Tip:** The id attribute can be used on **any** HTML element.
- **Note:** The id value is case-sensitive.
- **Note:** The id value must contain at least **one** character, and must **not** contain whitespace (spaces, tabs, etc.).

Difference Between Class and ID

- An HTML element can only have one unique id that belongs to that single element, while a class name can be used by multiple elements:
