What does a compiler do in java?

Which command do you use to run a java program?

What is a platform?

Platform

Hardware:
Silicon + plastic + iron + aluminium

Software:
ios – iphone operating system

A platform is the hardware or software environment
in which a program runs

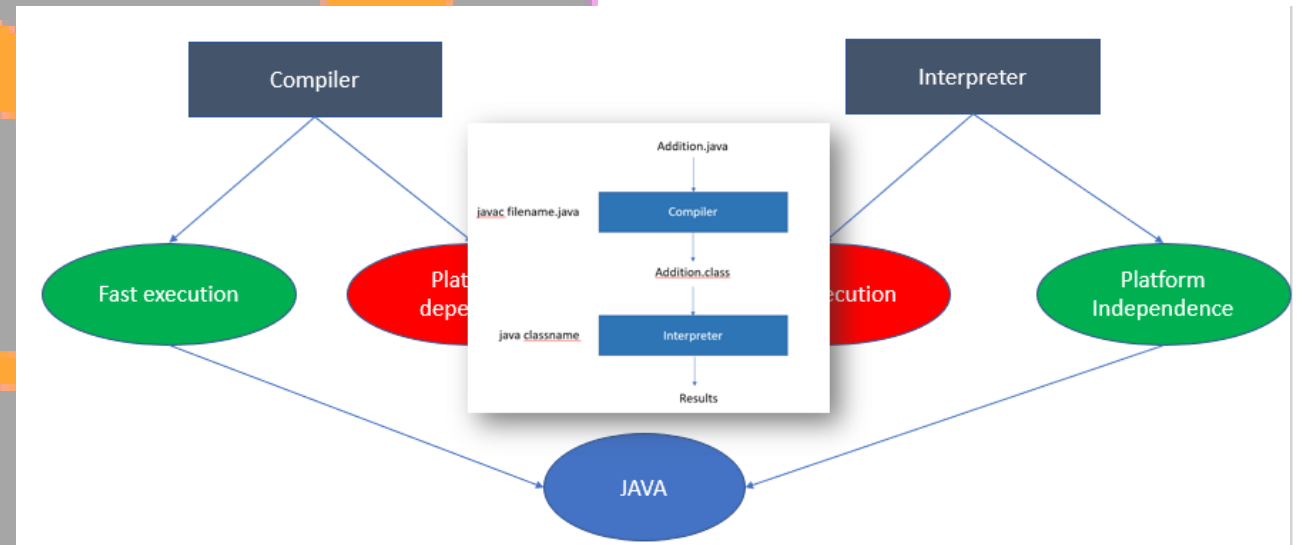

What is platform Independence?

- WORA(**W**rite **O**nce **R**un **A**n anywhere)
- You can **write your code once** and then **run it anywhere**, on **any platform** that provides the environment to run it (**WORA**)
- The JVM is different for each platform. So, **the platform dependent JVM's will achieve platform independence.**
- Explain **W**rite **O**nce **R**un **A**n anywhere

Is Java compiled or interpreted language?

- Java is **both compiled and interpreted language**
- **javac** is the **compiler** used to compile the source code
- **java** is the **interpreter** used to execute the byte code generated by the compiler

What is the value of first 4 bytes of a class file structure

4.1. The ClassFile Structure

A class file consists of a single ClassFile structure:

```
ClassFile {  
    u4      magic;  
    u2      minor_version;  
    u2      major_version;  
    u2      constant_pool_count;  
    cp_info constant_pool[constant_pool_count-1];  
    u2      access_flags;  
    u2      this_class;  
    u2      super_class;  
    u2      interfaces_count;  
    u2      interfaces[interfaces_count];  
    u2      fields_count;  
    field_info fields[fields_count];  
    u2      methods_count;  
    method_info methods[methods_count];  
    u2      attributes_count;  
    attribute_info attributes[attributes_count];  
}
```

The items in the ClassFile structure are as follows:

magic

The magic item supplies the magic number identifying the class file format; it has the value 0xCAFEBADE.

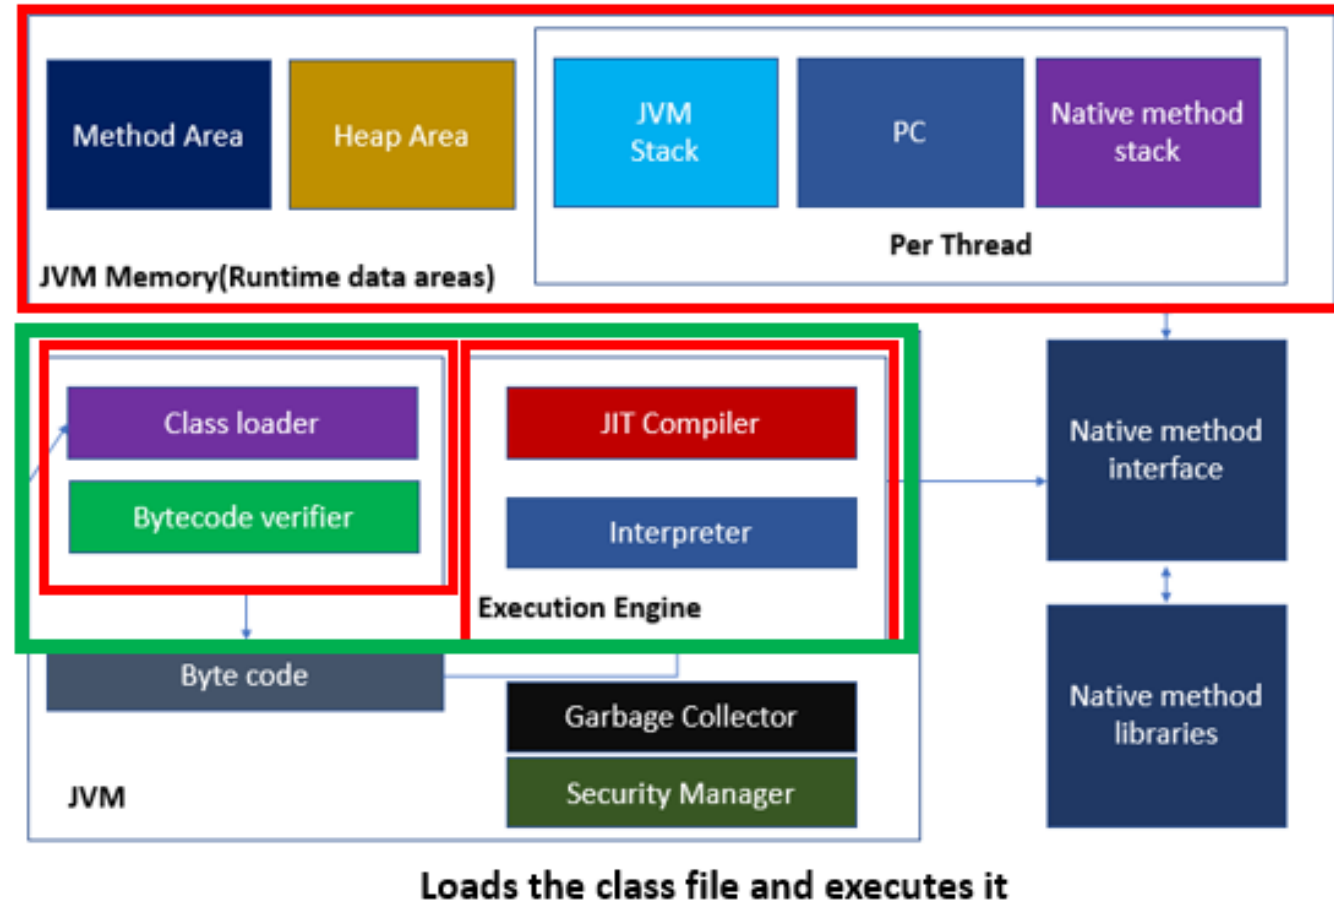

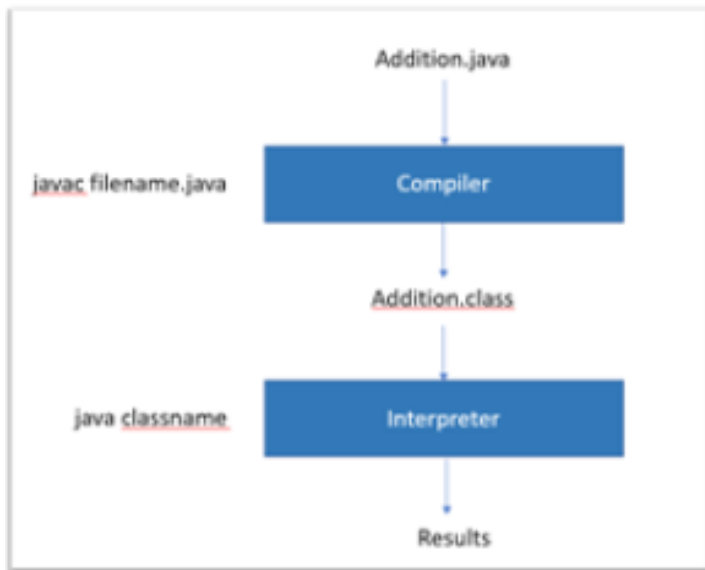

0xCA, 0xFE, 0xBA, 0xDE

Difference between compiler and interpreter?

Compiler	Interpreter
Compiler checks the entire program and translates into the machine code at once	Interpreter checks the program one statement at a time and translates it into machine code
Compiler takes more time to analyse the source code, but takes less time to execute the program	Interpreter takes less time to analyse the source code, but takes more time (little slow than compiler) to execute the program
Ex: C, C++, Erlang, Go	Ex: Python, JavaScript, PHP, Ruby

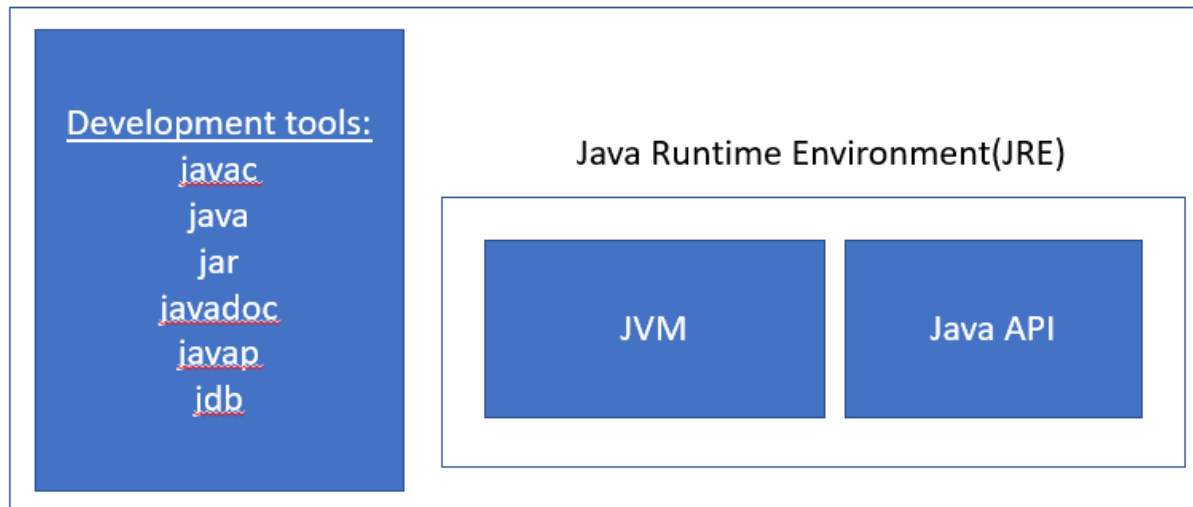

Explain JVM Architecture

1. Class loader subsystem
2. Runtime data areas
3. Execution Engine

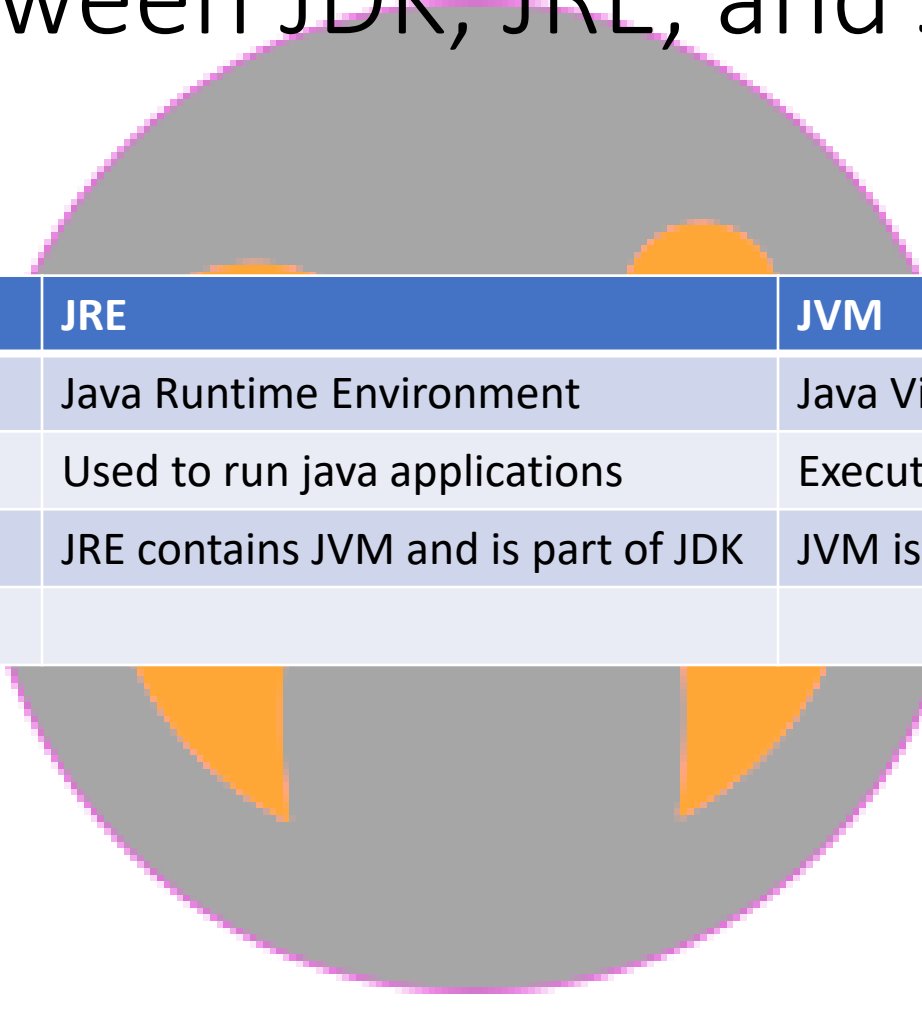

What is JRE?

- **JRE** stands for **Java Runtime Environment**
- It is required to execute the byte code generated by the compiler

Difference between JDK, JRE, and JVM

JDK	JRE	JVM
Java Development Kit	Java Runtime Environment	Java Virtual Machine
Used to develop java applications	Used to run java applications	Executes java byte code
JDK contains JRE	JRE contains JVM and is part of JDK	JVM is part of JRE

What does JIT compiler do?

- The **Just-In-Time (JIT) compiler** is a component of the **Java Runtime Environment** that improves the performance of Java applications at run time.

JIT Compiler

```
class JITTest{  
    String name="JIT";  
    static int totalSum = 0;  
  
    void display(){  
        System.out.println(name);  
    }  
  
    void calculate(){  
        totalSum = totalSum + 1;  
    }  
}
```

Method call count > 1000 = save the machine code for future calls

Threshold value = 1000

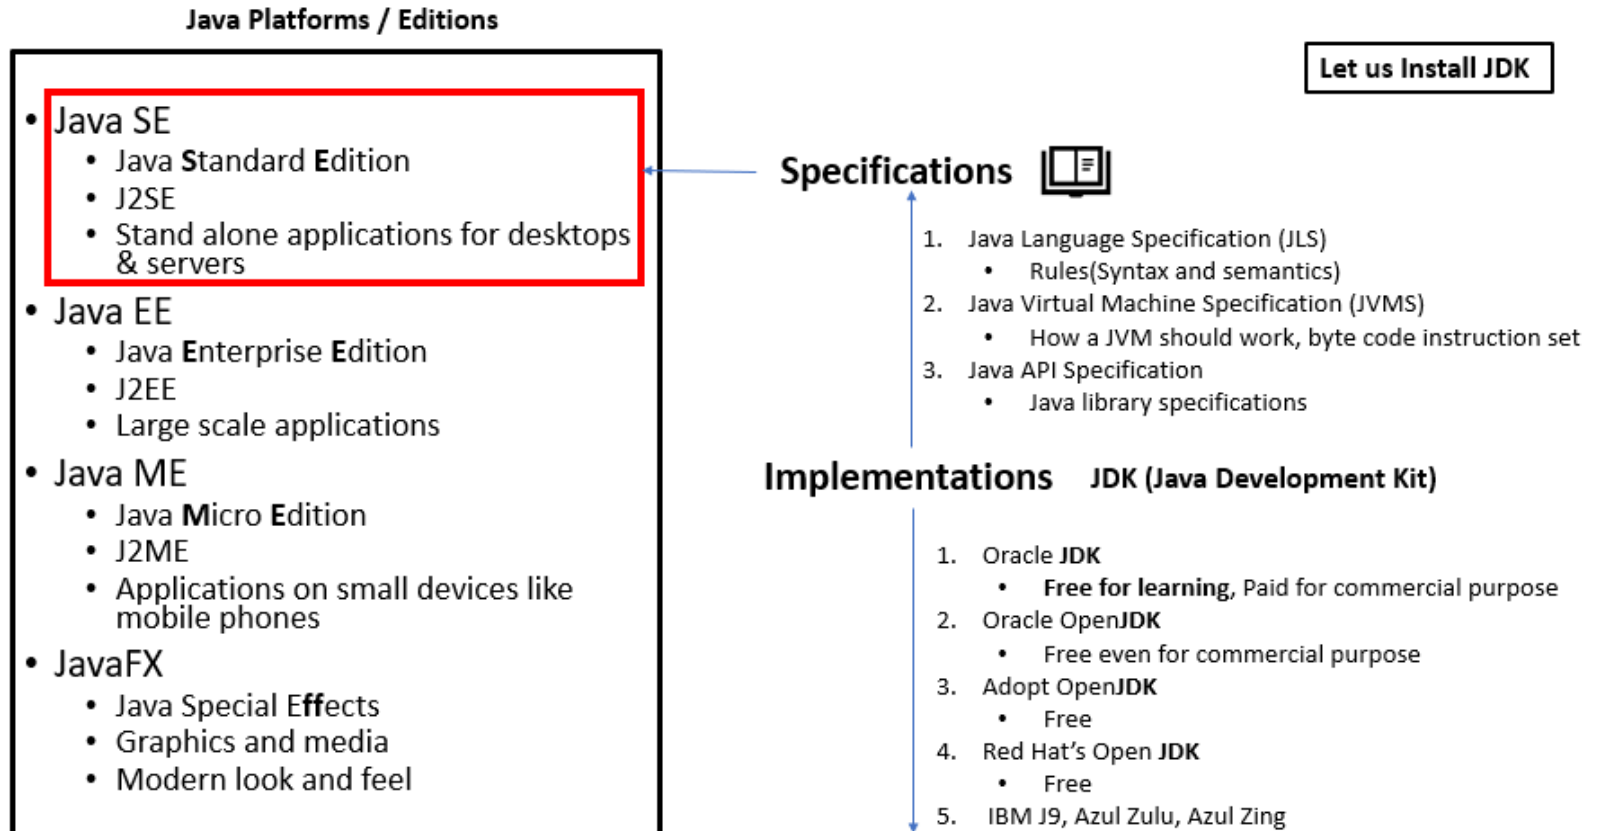

The problem with the interpreter is that it interprets every time, even the same method multiple times, which reduces the performance of the system.

Interpret = converting byte code to machine code

In order to improve performance, JIT compilers interact with the Java Virtual Machine (JVM) at run time and compile suitable bytecode sequences into native machine code based on the threshold count set by JIT in combination with the JVM method calls

Java SE stands for?

- Java **Standard Edition**
- **Core Java**

Find the mistakes(3) in this program

```
class Welcome {  
    public static void main(String[] a){  
        System.out.println("Welcome to suresh techs, I am learning Java");  
        System.out.println("My name is Hareesh, I will get job soon");  
        system.out.println(1);  
        System.out.println(2);  
        System.out.println(3);  
        System.out.prntln(4);  
        System.out.println("'Suresh techs' is 5 star");  
    }  
}
```

}

What next?

Write your first class on your own

చిన్న బ్రేక్ చిటికలో వచ్చేస్తా
