HTML

Class Attribute

Using The class Attribute

- The HTML class attribute is used to define equal styles for elements with the same class name.
- So, all HTML elements with the same class attribute will get the same style.

Using The class Attribute on Inline Elements

- The HTML class attribute can also be used on inline elements:

Note

- 1. The class name is case sensitive!
- 2. The class attribute can be used on any HTML element.

Select Elements With a Specific Class

- In CSS, to select elements with a specific class, write a period (.) character, followed by the name of the class:

Multiple Classes

- HTML elements can have more than one class name, each class name must be separated by a space.

Different Tags Can Share Same Class

- Different tags, like `<h2>` and `<p>`, can have the same class name and thereby share the same style:
