# HTML

Responsive

# Setting The Viewport

- When making responsive web pages, add the following `<meta>` element in all your web pages

# Responsive Images

- Responsive images are images that scale nicely to fit any browser size

# Using the width Property

- If the CSS width property is set to 100%, the image will be responsive and scale up and down

# Using the max-width Property

- If the max-width property is set to 100%, the image will scale down if it has to, but never scale up to be larger than its original size

# Show Different Images Depending on Browser Width

- The HTML `<picture>` element allows you to define different images for different browser window sizes

# Responsive Text Size

- The text size can be set with a "vw" unit, which means the "viewport width"

# Media Queries

- With media queries you can define completely different styles for different browser sizes

# Responsive Web Design - Frameworks

- Using W3.CSS
- Bootstrap

Thank you
