till chapter 5 to 10

CHAPTER 11

SURESH TECHS

C PROGRAMMING COURSE

Define function

- A function is a set of statements that can optionally take **inputs**, do some specific **computation** and may produce **output**
- Ex:
 - switchOnLight()
 - getWater()
 - changeChannel()
 - openLaptop()

What is void keyword?

- **void** keyword specifies that the function doesn't return a value

```
void subscribeMessage(){  
    printf("Please do subscribe to suresh techs channel!");  
}
```

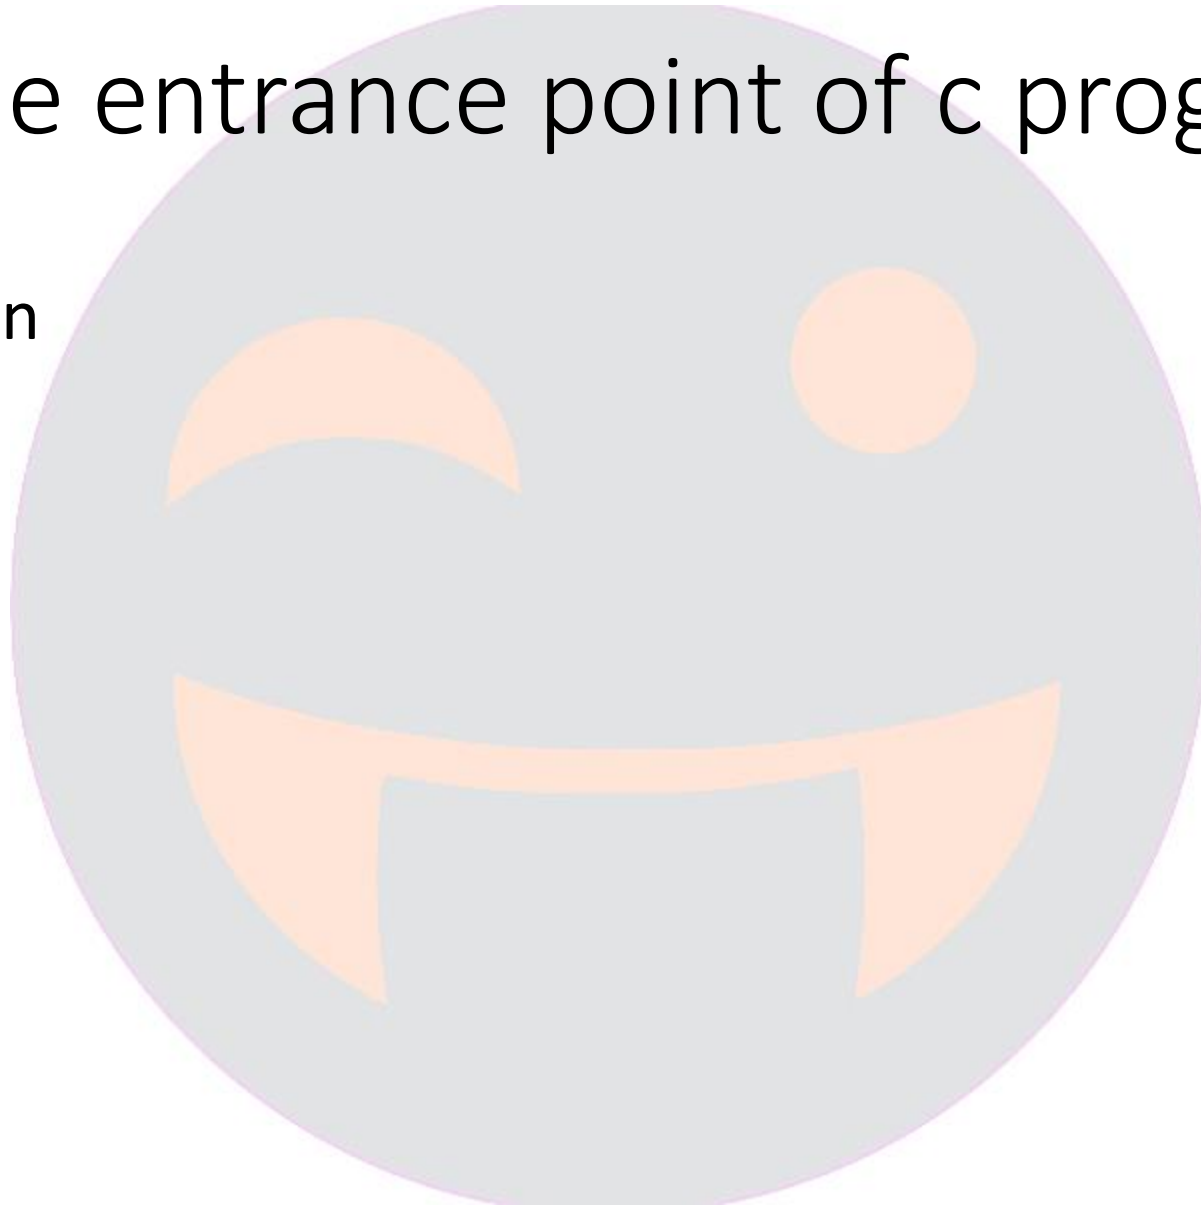

Function also know as?

- Method

What is the entrance point of c program?

- `main()` function

What are these

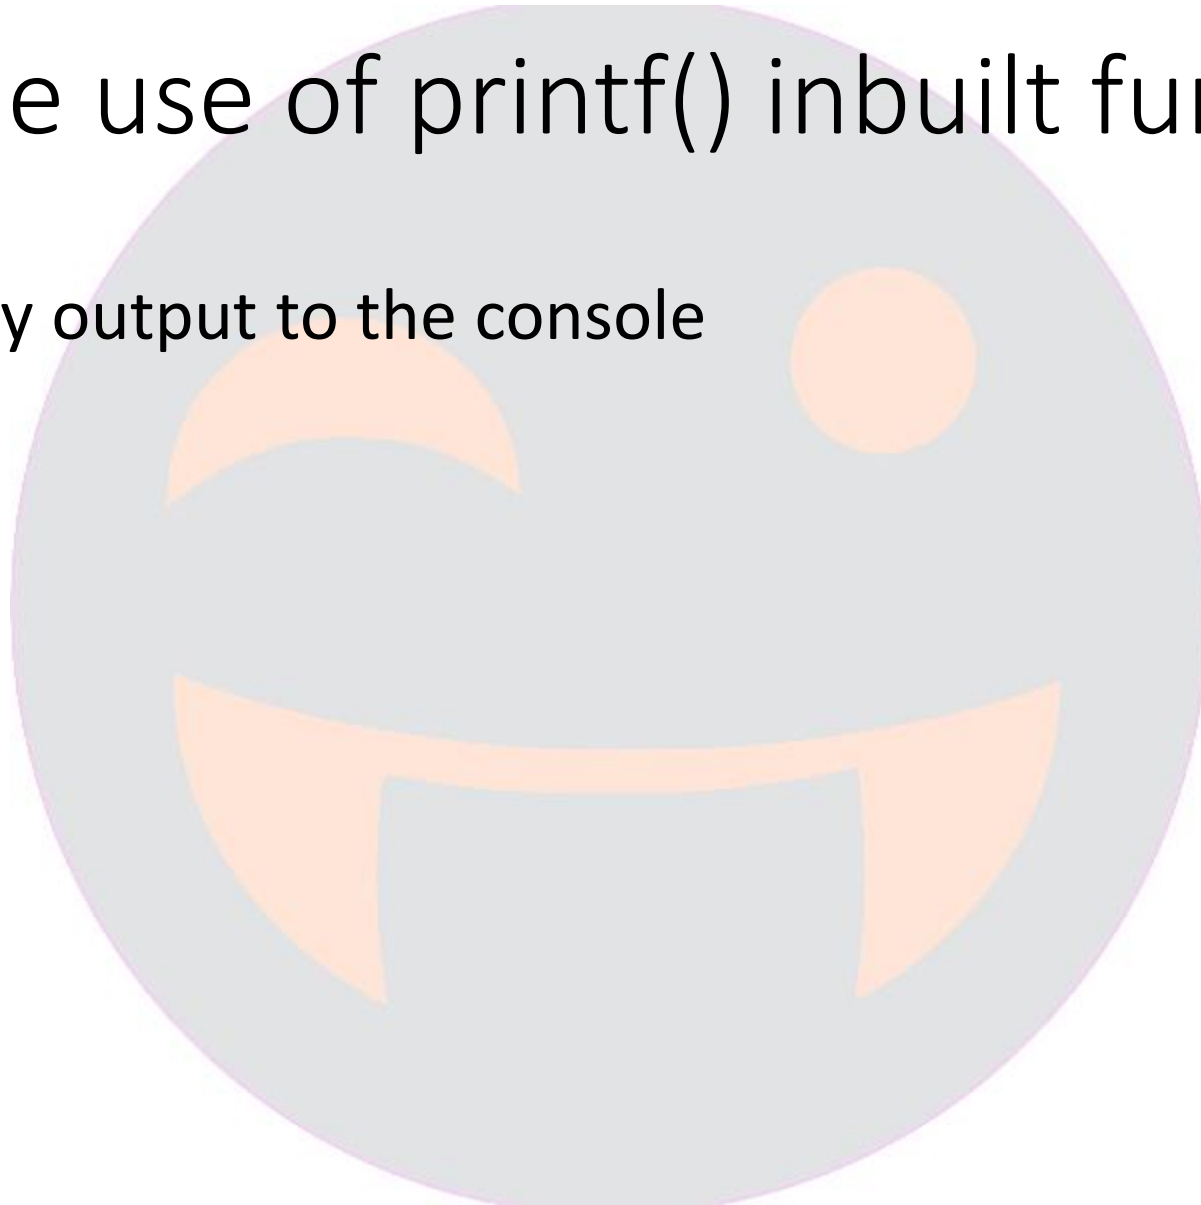

- abort
- abs
- acos
- pow
- **printf**
- putc
- puts
- qsort
- y0
- y1
- yn

**built-in functions, will be
available under header files**

What is the use of printf() inbuilt function?

- Used to display output to the console

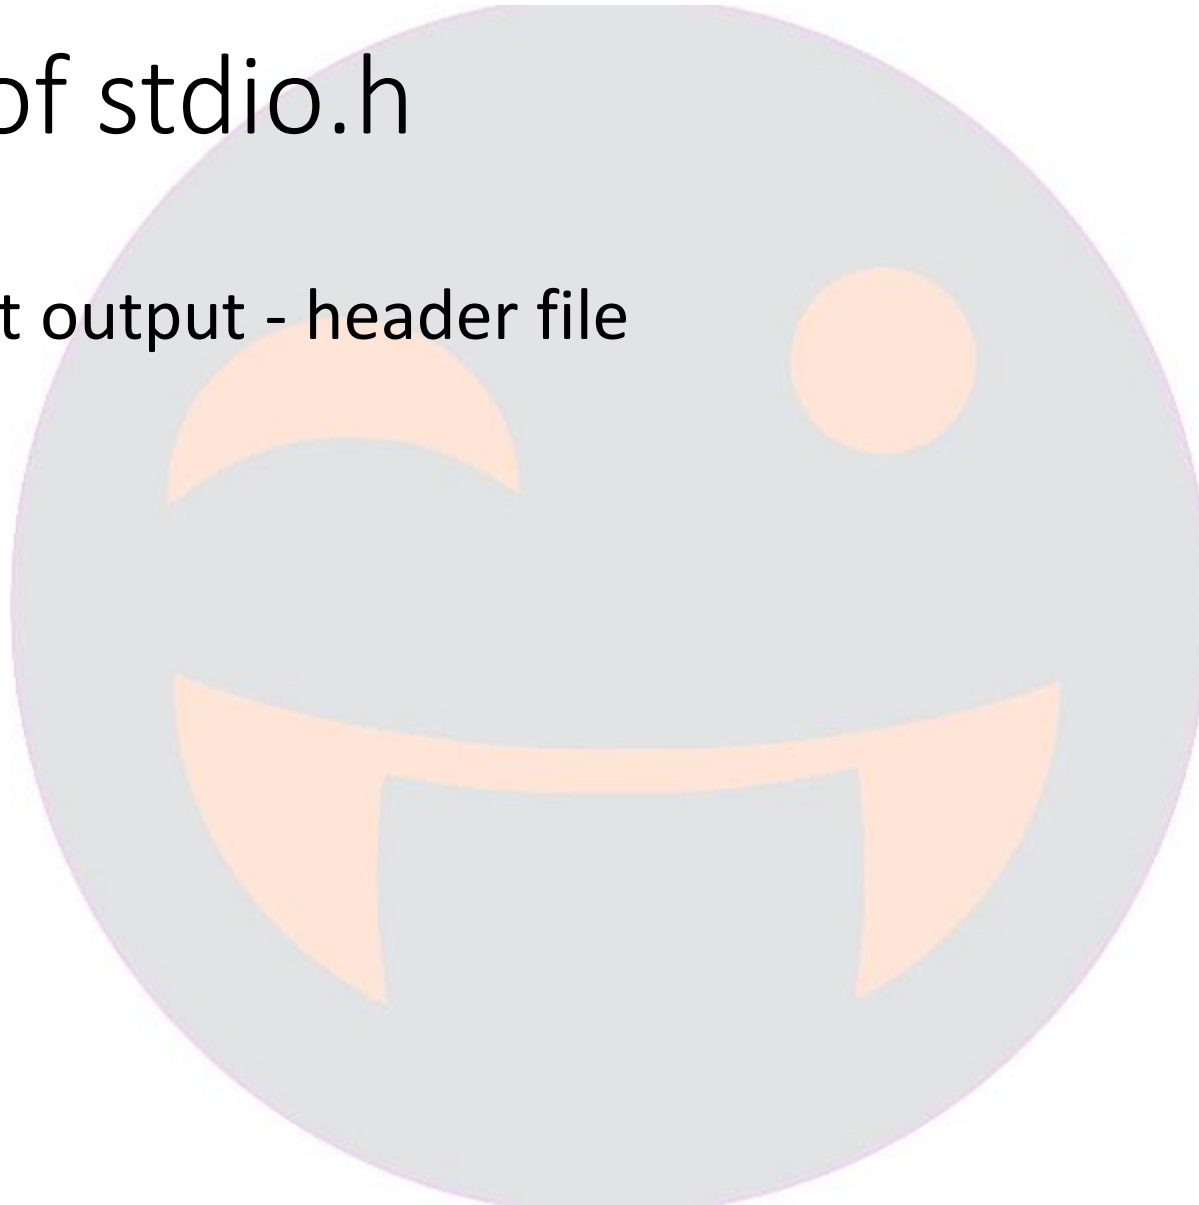

What is #include? It's use?

- #include is a preprocessor directive
- Used to include header files in the program(to work with inbuilt functions)
- #include<**stdio.h**>

Full form of stdio.h

- Standard input output - header file

What is gcc?

- It is a compiler
- Gnu Compiler Collection

Who is the father of c program

- Dennis Ritchie

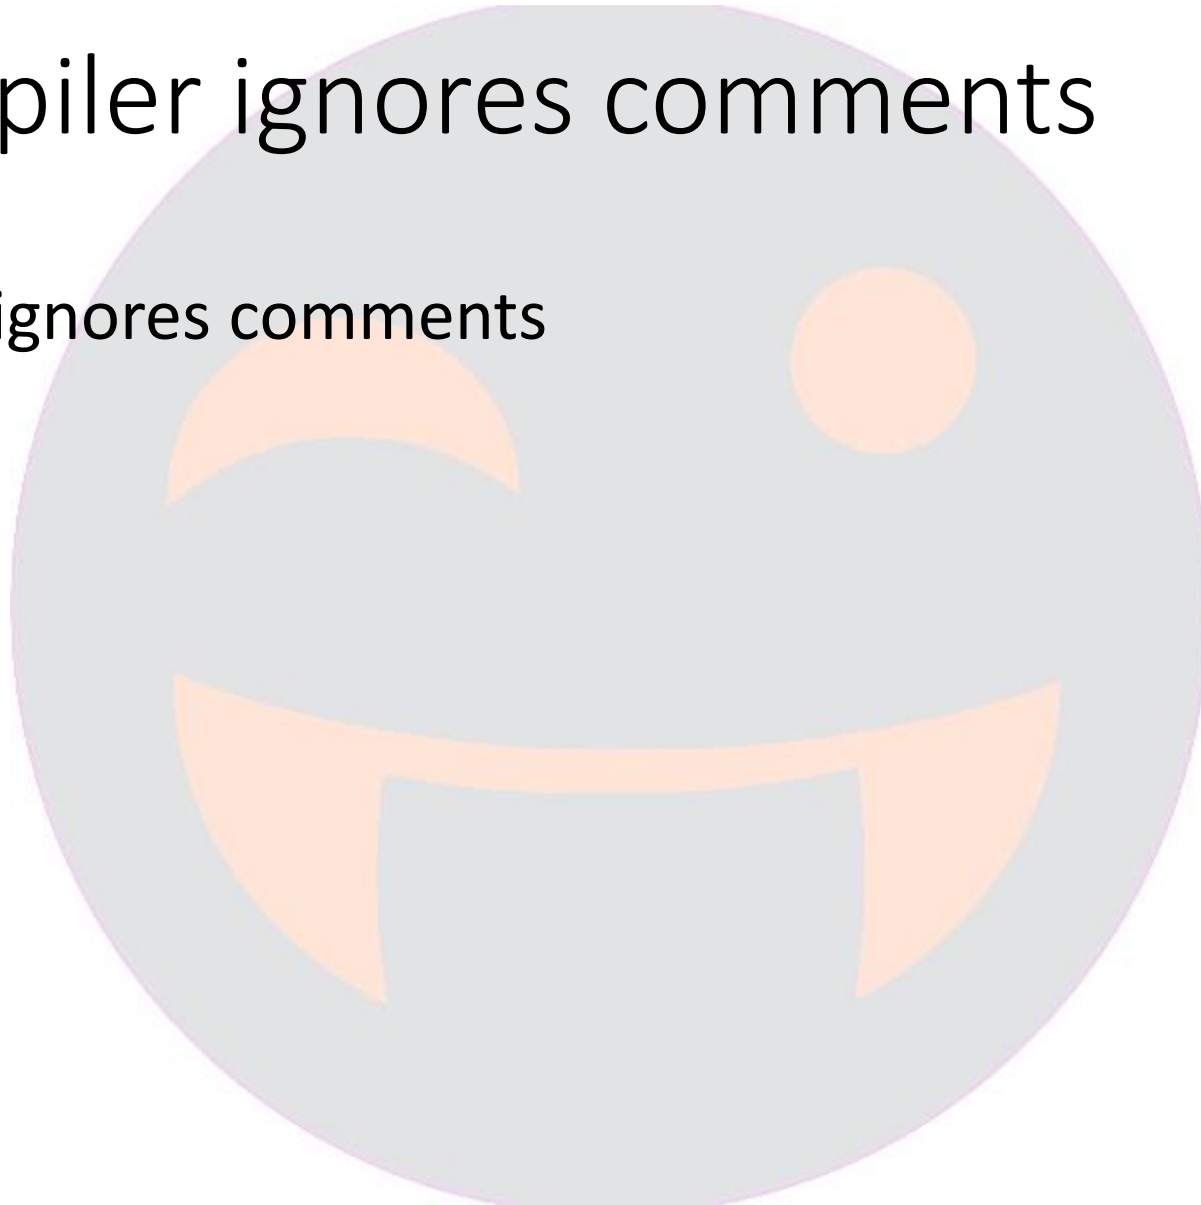

How to put multiline comments

```
/*multiline comments  
Are here*/
```

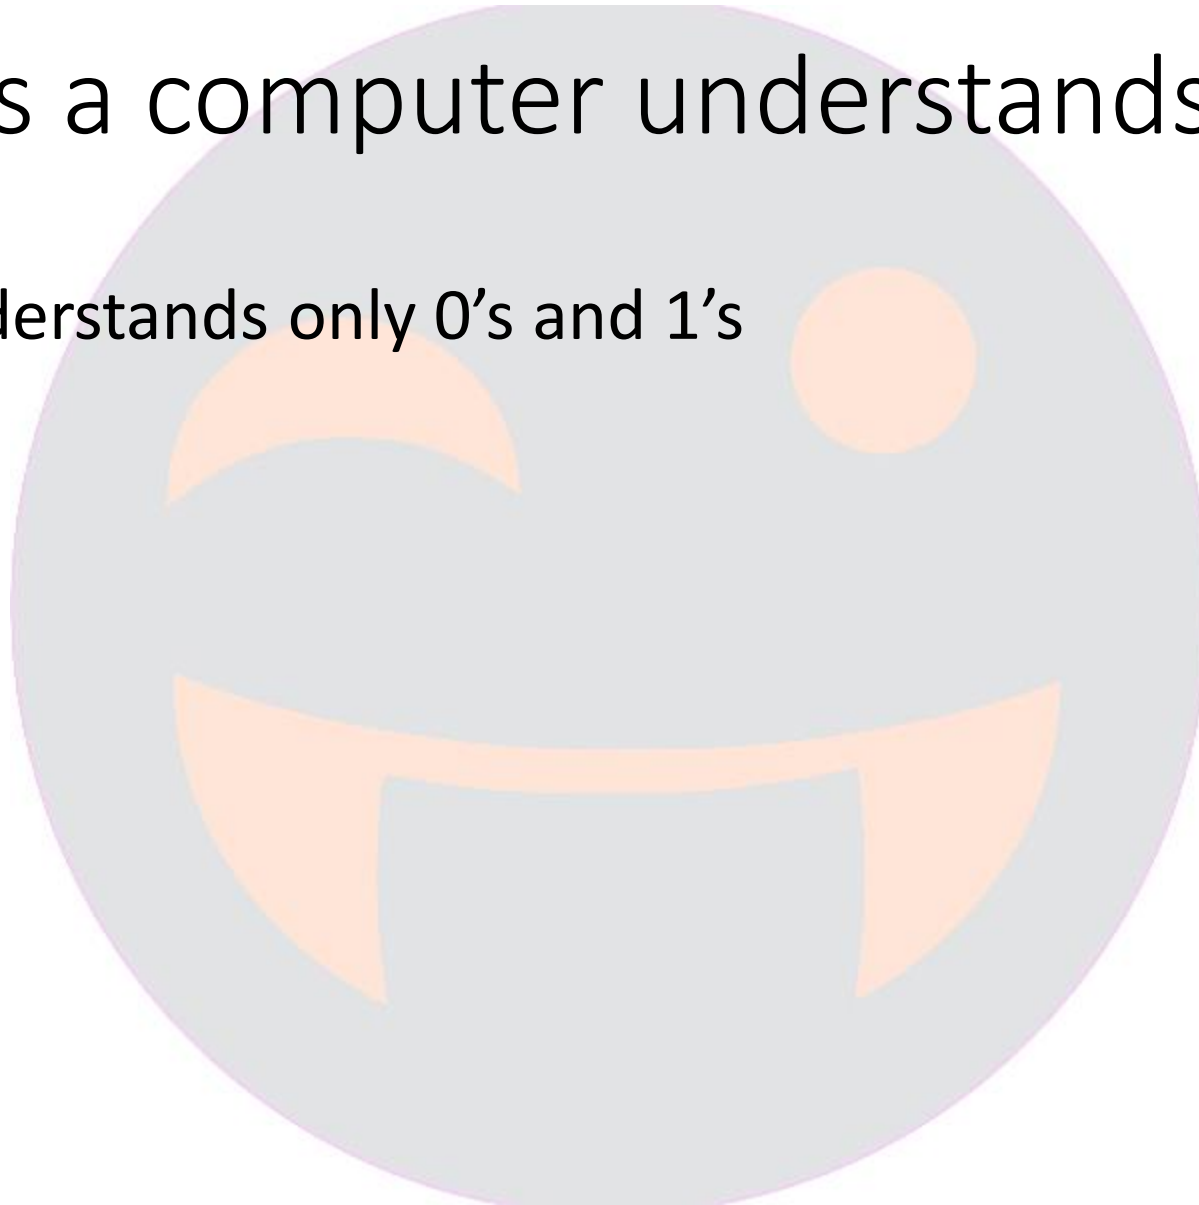

Does compiler ignores comments

- Yes, compiler ignores comments

What does a computer understands

- Computer understands only 0's and 1's

Have you subscribed our channel?

- Liked our videos
- Shared with your friends
- Subscribed to our channel

What next?

- Let's write few programs using printf() function
