HTML

Charsets

Charsets

- To display an HTML page correctly, the browser must know what character-set (encoding) to use

In the Beginning: ASCII

- Since ASCII used 7 bits for the character, it could only represent 128 different characters.

In HTML 4: ISO-8859-1

- The default character-set in HTML 4 is ISO-8859-1

(ANSI) In Windows: Windows-1252

- It uses a full byte (8-bits) to represent 256 different characters.

In HTML5: Unicode UTF-8

- The default character-set for HTML5 is UTF-8

Thank you
